This protocol is to be implemented for my patient referred to home health unless there is an exception order at the time of facility discharge. The frequency for Physical Therapy (PT), Occupational Therapy (OT), and Skilled Nursing (SN) may be adjusted to fit into calendar week periods in order to meet regulatory requirements.

THA Protocol

Instructions for Home Health

Anticoagulations:	81mg ASA 2x/daily x 6 weeks: Enteric coated aspirin (Ecotrin) or Xeralto.		
Incision:	Closed with Dermabond skin glue. No staples/sutures. Keep clean and dry.		
WB Status:	WBAT		
PT to Assess:	Level of strength, balance, ROM, coordination, transfers, mobility and endurance. Pt's ability to perform		
	ADL's/IADL's. Assessment of home environment, and make recommendations for safety. Assess pt's pain		
	level and understanding of pain relief measures.		

PT to Instruct Patient/Caregiver

Allowed 3 days po			
	Allowed 3 days post-op if incision healing appropriately and without drainage. Keep Mepilex		
dressing as dry as possible. Dressing stays on for 7 days post-op. Do not soak or submerge			
incision.
